

Midway Power Supply Conversion Kit #7
Copyright 2016 [Arcadeshop, LLC](#) - all rights reserved.

WARNING

Although this upgrade has been tested and the techniques used will not directly cause harm to your game. If you do something wrong, you can very seriously damage the electronics! So...

...Please read the instructions.

To perform this upgrade you should:

- Have a working understanding of electronics.
- Be familiar with safe handling procedures for electronic components.
- Be able to follow directions.

Anytime you start messing around with something (particularly something electronic) you accept a certain amount of risk that you may break something. This kit carries with it no guaranty of compatibility to your particular game. If you carefully follow these instructions, you'll do fine and everything will work. If this looks like it's above your confidence level please recruit someone to install the kit for you!

Introduction

Congratulations! You now have the power supply conversion kit which should bullet proof your game. The original power supply could be rebuilt, but a new switching power supply is a more efficient solution.

Before we get started, grab your favorite beverage, maybe something to snack on, and find a quiet place to read this manual so you fully understand what to do before you start tinkering around with your precious labor of love!

Necessary Parts and Tools:

You will need the following parts/tools for this upgrade...

- Phillips Screwdriver
- Pliers

Step One: Unplug the game from its power source!

While installing this kit, electric shock is possible if power is present!

Step Two: Remove the old power supply

The original power supply board is mounted on the side wall and has a large Black heat sink.

Unplug the short 12 pin connector from the board. (this will no longer be used) Next, unplug the long 20 pin connector. You can now remove the board or pack it away for safe keeping.

Step Three: Assembly and mounting new power supply

In this step you will need to attach the adapter and A.C. Power wires to the new switching power supply. (See page 1) Next, simply mount the new power supply where the old board was and connect the large 20 pin connector to the new adapter. The connector is keyed so you can only plug it in one way.

Locate the two A.C. power wires leading to the monitor. Find a convenient spot and tap the two wires from the new power supply to each of the monitor power wires.

Note: You could also tap into the marquee light for a power source.

Step Four: Check your work

Verify all connectors and be sure everything is secure. You may need to adjust the +5 volts to around 5.05 to 5.2 volts. For additional help visit our web site: www.arcadeshop.com

You have installed the kit – congratulations!

Final Notes:

This kit carries with it no guaranty of compatibility to your particular game. Although this kit has been tested with numerous games, there is a possibility that some of them are different. This kit carries no liability protection for you game, while there is no reason this kit should cause damage to your game, it is possible that incorrect or poor wiring can damage your game board(s). Liability is limited to repair/replacement of the Kit only.
